

Serial No. 09/988,296  
Amdt. dated November 24, 2003  
Reply to Office Action of July 23, 2003

Docket No. MRE-0042

Amendments to the Specification:

Please replace the paragraph on page 10, lines 13-22 with the following amended paragraph:

B1 The printed circuit ~~board~~ board (P) is carried, i.e., supplied, to the first and second conveyers 30 and 40 or the printed circuit board (P) discharged from the first and second conveyers 30 and 40 is discharged from the plurality of multi-layer transfer units 20 and 50 and is loaded. The plurality of multi-layer transfer units 20 and 50 supplying the printed circuit board (P) or loading the discharged printed circuit board (P) includes a first transfer unit 20 and a second transfer unit 50.

Please replace the paragraph on page 14, lines 14-25 with the following amended paragraph:

B2 The first transfer roller 21b is rotated by receiving the rotation force generated from a rotating motor (not shown) at the movement of the printed circuit ~~board~~ board (P) and drives the first belt member 21c installed between the plurality of first transfer rollers 21b. By driving the first belt member 21c by the plurality of first transfer rollers 21b, the printed circuit ~~board~~ board (P) mounted and loaded on the first belt member 21c can be carried to the plurality of first and second conveyers 30 and 40 and the printed circuit board (P) discharged from the plurality of first and second conveyers 30 and 40 can be loaded and stored.

Docket No. MRE-0042

Please replace the paragraph on page 18, lines 6-19 with the following amended paragraph:

The first and second conveyers 30 and 40 can mount parts on the printed circuit board (P) or can carry parts without mounting them under control of the controller 61 by programming the controller 61 previously. In this way, as the first and second conveyers 30 and 40 can mount parts selectively or simultancously, the parts mounting speed of the printed circuit-board board (P) can be improved. That is, the parts mounting speed can be improved by mounting parts by the second conveyer 40 simultaneously when parts are mounted by the first conveyer 30 or by receiving or discharging the printed circuit board by one of the conveyers while parts are mounted on the printed circuit board (P) by the other conveyer.
